

Ans. To The Q. No. 1

Given,

image to be convoluted = 256×256

filter size used = 8×8

Stride, $S = 2$

$\therefore F = 8$

max pooling = 2×2

padding, $P = 0$

total filters, $K = 6$

Now,

For Model 1:

filter = $6 \times 8 \times 8$

$$W_c = \left\lceil \frac{W + 2P - F}{S} \right\rceil + 1$$

$$= \frac{256 + 0 - 8}{2} + 1$$

$$= 125 = 6 \times 125 \times 125$$

$$\text{max pooling} = \frac{125}{2}$$

$$= 62.5 \approx 62$$

$$= 6 \times 62 \times 62$$

For Model 2:

filter = $6 \times 8 \times 8$

$$W_c = \left\lceil \frac{W + 2P - F}{S} \right\rceil + 1$$

$$= \left\lceil \frac{62 + 0 - 8}{2} \right\rceil + 1$$

$$= 28 = 2 \times 28 \times 28$$

$$\text{max pooling} = \frac{28}{2}$$

$$= 14$$

$$= 6 \times 14 \times 14$$

For Model 3:

filter = $6 \times 8 \times 8$

$$W_c = \left\lceil \frac{W + 2P - F}{S} \right\rceil + 1$$

$$= \left\lceil \frac{14 + 0 - 8}{2} \right\rceil + 1$$

$$= 4 = 6 \times 4 \times 4$$

$$\text{max pooling} = \frac{4}{2} = 2$$

$$= 6 \times 2 \times 2$$

\therefore Number of flattening layer Node

$$= 6 \times 2 \times 2 = 24$$

Input

 $\downarrow 1 \times 256 \times 256$
convolution \rightarrow

$6 \times 8 \times 8$
256×256

 \downarrow
 $6 \times 125 \times 125$ max pooling \rightarrow

2×2

 \downarrow
 $6 \times 62 \times 62$ convolution \rightarrow

$6 \times 8 \times 8$
62×62

 \downarrow
 $6 \times 28 \times 28$ max pooling \rightarrow

2×2

 \downarrow
 $6 \times 14 \times 14$ convolution \rightarrow

$6 \times 8 \times 8$
14×14

 \downarrow
 $6 \times 4 \times 4$ max pooling \rightarrow

2×2

 \downarrow
 $6 \times 2 \times 2$ Flattened \rightarrow

24
